K35, K55, and K75 have the same design, all of which are linear linear actuators with a diameter of 75MM, and are mainly used in industrial applications that require heavier loads. It is also very suitable for product applications that require a small installation space. The waterproof rating of this linear actuator can reach up to IP69 (optional). It can withstand high temperature, high pressure water impact, and the ingress of dust and other solid pollutants. It is suitable for construction machinery, photovoltaic tracking systems, ventilation systems, or food and beverage automation equipment...

Functional Overview

Voltage:	12V, 24V, 36V, 48V DC
Motor options:	DC motor, brushless DC motor
Maximum thrust (pull force):	16,000N / 14,000N
Slowest speed under load:	5.0mm/s (load 16,000N)
Maximum speed under load:	90 mm/s (load 1,000N)
Minimum installation size:	Stroke + 500mm
Dynamic lateral moment:	1,000Nm
Static lateral moment:	800Nm
color:	Silver gray, black
Voice:	60~68 DB
Adaptable temperature range:	-45°C ~ +75°C
Protection level:	IP65
Screw selection:	ball screw, trapezoidal screw
Switch type:	Built-in limit switch,
Signal options:	Potentiometer, Hall sensor, endpoint signal
Control options:	Synchronous control, independent control,
safety certificate:	integrated control, CAN bus control,
	Comply with ISO9001-2008,
	CE and RoHS regulations,

Motion Solutions for Clean Energy Applications

Photovoltaic solar energy High energy prices drive double-digit growth in solar energy

Coaxial panel. Solar panel tracking.

Improve efficiency and increase output from a given panel

Accurate, trouble-free positioning of up to 30% more panels

It's a challenge. The system must be rugged and capable

Withstands wind and weather. It must operate reliably and maintenance-free for many years.

Sun tracking requires drive solutions,

Stiff and will not backfire the drive in high wind conditions.

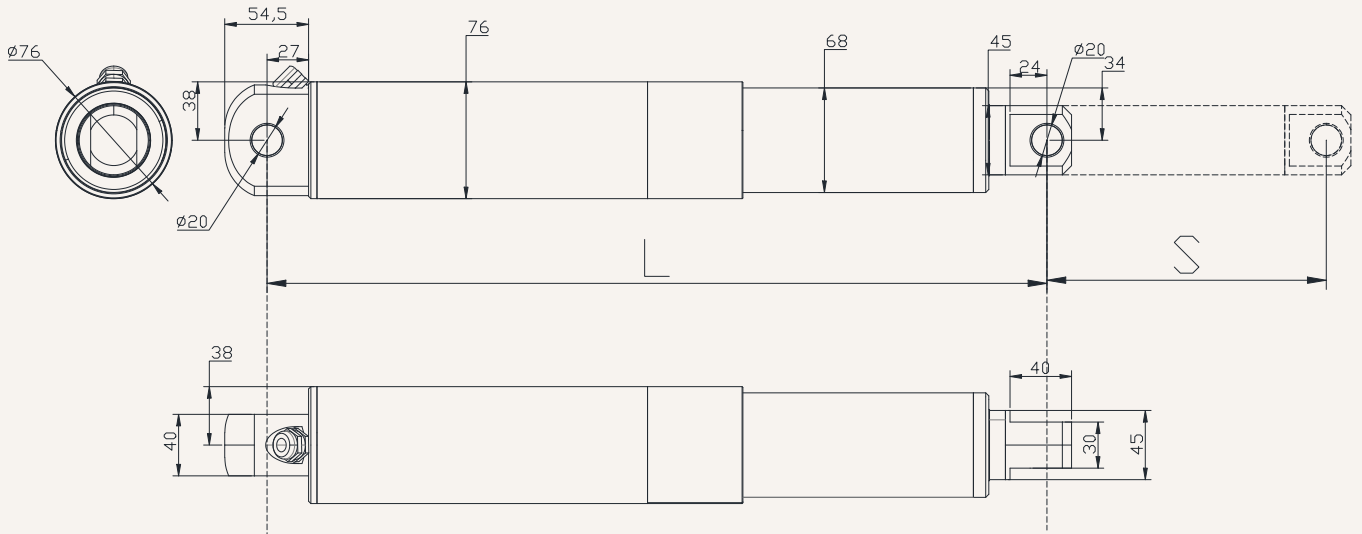

Rear installation can be retrofitted with flange installation

Electric linear actuators for automated guided vehicles, mobile equipment and industrial automation

Remark

1. The speed and current on the upper side are the materials that extend when pushed.
2. For 12V motor, the speed is about the same and the current is about 2 times higher.
3. The current & speed in the table are the test average values in the extension direction under thrust application.
4. The current & speed in the table and graph are the test average values of the GeMinG control box configuration, and there is an error of about 10% depending on the control box model.
(The voltage is about 29V DC at no load, and drops to about 24V DC at rated load)

Stroke: minimum value $\geq 20\text{mm}$, please refer to the table below for the maximum value of load and stroke

load (N)	Maximum stroke (mm)

12,000	301-400
7,000	401-600
6,000	601-900

Remark:

Lateral moment Y direction = $X \times 0.8$

Static lateral moment = dynamic $\times 2$
